PROFESSIONAL SUMMARY

Senior technical account management professional with 25+ years of enterprise IT experience and a consistent record of owning high-stakes customer relationships at scale. Proven ability to drive escalation resolution, lead proactive optimization engagements, and deliver measurable customer outcomes across \$10M+ portfolios. Deep infrastructure fluency spanning VMware vSphere, Hyper-V, SAN storage, Cisco networking, and VoIP — combined with executive-level communication skills and the operational discipline to manage concurrent complex accounts. U.S. citizen.

WORK EXPERIENCE

Windows Enterprise Customer Success Architect

October 2013 – Present

Rackspace Technology — Remote

Proactive Account Engagement & Optimization

- Managed 24+ enterprise accounts across a 12-year tenure at Rackspace, carrying 1–5 concurrently — proactively identifying performance gaps, capacity constraints, and optimization opportunities across customer environments and driving resolution in partnership with Engineering and Operations.
- Managed the full customer lifecycle for a Fortune 500 management consulting firm over 10+ years — initial onboarding, sustained growth from ~\$300K to \$1.5M/month at peak (~\$18M/yr), architecture evolution, and a structured transition to a hybrid cloud/multi-vendor environment, with C-suite relationships and trust intact throughout.
- Established and maintained governance structures for each account: stakeholder maps, engagement cadences, success plans, and KPI frameworks — leveraging operational dashboards to transparently track and report on customer health and commitment fulfillment.

Escalation Management & Incident Command

- Assumed escalation manager role during high-impact P1 events — managing real-time executive communication, driving internal war room coordination, and owning corrective and preventative action planning post-incident.
- Coordinated cross-functional teams across Support, Operations, and Engineering to resolve critical incidents and maintain SLA commitments under pressure.
- Monitored support request patterns to identify recurring issues and drive systemic fixes through engineering stakeholders — reducing repeat escalations across portfolio accounts.

Cross-Functional & Sales Collaboration

- Partnered with Sales and Professional Services on scope definition and service tier alignment for enterprise accounts — translating customer business objectives into actionable infrastructure requirements and engaging CIOs, IT Directors, and CTOs to identify technology opportunities across compute, storage, network, and cloud.
- Formally and informally mentored junior Customer Success Architects — providing technical guidance, account strategy coaching, and escalation support; developed and led team-level training programs on infrastructure operations and SQL Server.

Technical Infrastructure & Architecture

- Provided enterprise architecture consulting across Windows Server, VMware vSphere, Hyper-V, SAN storage, and network infrastructure — including firewalls, load balancers, VPN, and Cisco VoIP systems.
- Managed SAN storage infrastructure including Dell EMC PowerMax, PowerStore, and Pure Storage arrays — responsible for capacity planning, performance analysis and troubleshooting, and array-to-array migrations.
- Managed VMware vSphere and Hyper-V virtualization environments at capacity management and performance monitoring levels — consistent with hands-on hypervisor administration experience.

- Led cross-datacenter migrations across multiple Rackspace facilities, coordinating hardware EOL/refresh cycles, workload moves, and customer communications throughout.
- Developed and maintained customer-facing reporting and operational dashboards using Excel automation to track infrastructure health, SLA metrics, and service delivery KPIs.

Windows Administrator II

February 2012 – October 2013

Rackspace Technology — San Antonio, TX

- Provided remote Windows server support for Emerging (SMB) business unit across Cloud and Dedicated environments; troubleshoot issues to application level including IIS, SQL, DNS, and RDS.
- Developed and led team-level SQL Server training; acted as escalation point for team members on complex issues.

EARLIER EXPERIENCE

Network Consultant, On Support Inc. (Contract) (2010 – 2012) — 1st–3rd tier SMB infrastructure support; managed hosted Exchange, terminal server, and VM environments; administered VPN network of 100+ nodes.

Technical Support Specialist, Compass Learning (2009 – 2010) — 2nd-tier enterprise software support; managed VM environment and templates; upgrade cycles for 5 large enterprise accounts.

Sr. Support Analyst, Heliovolt Corporation (Contract) (2008 – 2009) — Functional Manager of Support Analyst team; maintained AD, Exchange 2007, Terminal Server farm, Cisco VoIP; managed VMware host and guest servers.

IT Services Manager / Sr. Network Consultant, On-Site Computer Solutions (2003 – 2008) — Managed team of up to 15 technicians; 2nd/3rd tier network support for ~150 clients; NT4 to Windows Server 2003 migrations.

Sr. Network Administrator, Central Texas Technologies (2001 – 2003) — Administered Windows 2000/AD domain, multi-site Exchange, Cisco Call Manager and Cisco Unity; 3rd-tier support for 200+ customer ISP.

Systems Engineer / Internet Technology Manager, TManage | Coach USA (1998 – 2001) — Windows NT/2000 domain administration, datacenter design, NT4-to-2000 migration planning; multi-server Lotus Domino network; corporate firewall and internet/intranet infrastructure.

CERTIFICATIONS

AWS Certified Cloud Practitioner | Generative AI for Business Leaders (LinkedIn Learning, 2023) | AI and Business Strategy (LinkedIn Learning, 2016)

Prior Certifications (inactive): A+ | MCSA | MCSE | Cisco Unity Certified

TECHNICAL SKILLS

Networking & VoIP: Cisco IOS, firewalls, load balancers, VPN, VoIP (Cisco Call Manager, Cisco Unity); ISP/WAN infrastructure administration

Virtualization: VMware vSphere, Hyper-V, Red Hat Linux; hypervisor capacity management, performance monitoring, and rightsizing

Storage: Dell EMC PowerMax, PowerStore, Pure Storage, NetApp — capacity planning, performance management, array migrations

Platforms: Windows Server 2000–2019; hybrid cloud architecture, disaster recovery, high availability

Account Management: QBR/ABR ownership, escalation frameworks, SOW governance, KPI/SLA dashboards, executive stakeholder engagement

Tooling: ServiceNow, Power BI, Excel automation & dashboarding, PowerShell, Linux/bash scripting; exploratory use of Claude Code and ChatGPT Codex
